

Gluing & Quality Assurance Systems
from One Place.

WHAT'S NEW.

With industry needs changing everyday, Valco Cincinnati, Inc. has redefined the way it is doing business with the introduction of its newest gluing and quality assurance systems division, Valco Melton. Valco Melton has implemented new research & development, design innovation, and business mergers to lead the industry forward.

Our Objective.

With environmental conditions changing everyday, providing customers with the safest possible equipment that will shift with the needs of the industry has become an important part of our business. With this focus, it is our objective to bring you the strongest products that meet and exceed safety, quality, and environmental aims. These requirements are achieved consistently meeting strict guidelines set by our ISO9001 program registration, as well as making our company's products meet RoHS, or WEEE compliance. Through these programs we hope to create the highest of quality while producing the most ecologically fit equipment in the industry to help you best reach your sustainability requirements..

A full-page background image showing two skiers in winter gear ascending a steep, snowy mountain slope. The skier in the foreground is wearing a red jacket and black pants, while the second skier is in a blue and black jacket. They are using ski poles and appear to be in motion. The sky is a clear, vibrant blue, and the snow is bright white with some shadows.

Team up

with the leading provider

for a powerful experience.

Over 55 years of success.

Valco Cincinnati, Inc. acquired the well-established European hot melt manufacturing company, Melton, S.L.U., based out of Navarra, Spain in 2006. This was Valco Cincinnati's fourth major brand addition to the gluing division. In 2008, through the merging of Valco, Shure-Glue, and Melton businesses, Valco Melton was officially named the Valco Cincinnati, Inc. gluing and quality assurance division.

Everyday, Valco Melton continues to supply the industry as a world leader in the manufacturing and supply of quality assurance and adhesive application systems and parts. Because it is our goal to meet and exceed your day-to-day expectations, we are constantly looking for new ways to improve our operations. We continue to listen to customers needs and tailor our organization to satisfy them. This is partly why we have been successful in the adhesive application business for over 55 years with a significant number of important industry contributing clients.

Melton® Hot Melt

With the merging of Melton® & Shure-Glue® Products into one complete line, Valco Melton's hot melt division continues to turn heads.

The change.

We now offer an increased line of products and compatible spare parts with a faster turnover and larger inventory of spare parts. Because Valco Melton offices are working together to bring customers increased product availability, this also means an expanded support network. With a 24 hour technical service line, it is our main objective to bring you total support.

Applications for a Wide Range of Industry Sectors.

Valco Melton offers Melton® hot melt application solutions to a range of sectors including the Packaging, Non Woven, Bookbinding, Edgebanding & Profile Wrapping, Woodworking, Sift-Proof, Ribbon Coating or Laminating Industries. A select number of our Melton® representatives also offer refurbishment, adhesive and leasing packages.

Our **Sift-Proof Gluing Systems** apply multi-bead hot melt patterns on the flaps of a carton to create a barrier seal when filling cartons with powders and other fine-grained materials. Applicators can be contact or non-contact depending on the machine configuration and box style.

For **Ribbon Coating or Laminating Systems**, Melton® Coating heads apply pressure sensitive, reactive and EVA adhesives. Together with pre-melter or drum-unloader delivery systems, coating heads can be configured for a multitude of widths from narrow ribbons up to 2 meter wide lamination, specialized coating, file folder construction, and mailer manufacturing.

SealTak® is a patented process for applying pressure sensitive hot melt adhesive and release liner in corrugated board for deferred use. Common products are small package "Peel-to-Seal" delivery boxes, but can also include envelopes and folding cartons. SealTak® cuts manufacturing cost by using less expensive raw materials and eliminating the machine downtime associated with conditioning and reloading transfer tape rolls.

For **Non Woven** lines, Melton® products apply hot melt adhesives with swirl spray and fiberization, as well as a variety of highspeed intermittent coating heads. Together with M Series melters and pumps, complete systems can be integrated into networked machine controls. Typical applications include diaper, feminine-care product, tissue and towel manufacturing, and spray laminated products.

By combining robust pre-melters with engineered applicators, our **Edgebanding Systems** offer a fully enclosed alternative to glue pots in the production of laminated wood products. Offering edge-to-edge gluing of EVA and PUR adhesives, these systems track board variation in both dimensions to ensure an accurate, skip-free application.

In addition to pre-melters, we supply applicators for side-joint gluing, spine gluing on perfect binders and saddle-stitchers, casing-in and end-sheet gluing for **Bookbinding Applications**. Card insertion and tipping systems are also available as well as roll applicators for labeling. Discover the convenience and reliability of these systems on any bookbinding line.

Take advantage of a single source for equipment and adhesive products, as well as application expertise for the best manufacturing solution. Ideally matched with specific equipment, **Adhesives** are available at select locations for packaging and converting applications. These include pressure sensitive adhesives and a variety of EVA formulations, such as low-temp, fugitive and freezer grade glues.

Equipment with **Adhesive Packages** and **Lease-to-Own** programs are also available for customers who have special budgetary needs. Contact your local Melton® representative for more information.

Valco® Cold Glue & Quality Assurance Systems

Valco Melton's cold gluing division continues to lead the industry as a top equipment & quality assurance system manufacturer. With a number of experienced and dedicated engineers and expert support force, you are sure to get exactly what you are looking for.

Leading the Industry in Cold Glue & Quality Assurance.

The Valco® brand established itself as an integral part of the packaging industry more than 55 years ago with the introduction of the first pressurized, electronically activated cold glue systems. This reputation has been established with honest appraisals of customers' needs – the expert design, manufacture, and installation of the Valco® systems and the unparalleled worldwide service support for each of our customers. This objective is consistent throughout each of the Valco Cincinnati, Inc. business divisions.

In 2001, VanSco® was selected to become a business and brand of Valco Cincinnati, Inc. because it also held similar values and experience. In January of 2008, Valco Melton designated this California facility to also serve as its USA West Coast location. Considering 45 years of experience as both a manufacturer and a distributor of a complete line of adhesive application systems, from hand held to fully automatic equipment, VanSco rightly claims its position of supplying quality equipment at reasonable prices with fast delivery times.

Through our company's history, this steadfast philosophy has projected the cold gluing division into a multitude of significant market niches. As a result, our reliable and proven system packages have withstood "the test of time" and are running today in folding carton, woodworking, corrugated, envelope, bag, tissue, printing and graphic industries manufacturing plants around the world.

Challenges for Future Growth.

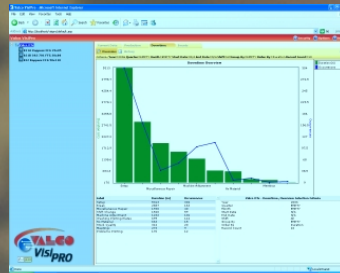

As joint participants in the production of packages and products, we see the change occurring in the manufacturing and presentation of products for better customer appeal in our retail and industrial marketplaces. These innovations demand technological change from us as your adhesive application partner. We are committed to driving these changes forward with you. This commitment to excellence is proven each year by continued growth and returning customers who have valued their experience with us.

A Range of Proven System Solutions to Custom Fit Most Any Application Need.

adhesive pumping systems • pump support systems
electronic control devices • application valves
applicator heads • mount support systems
filters • regulators • cables • glue hoses

Upward Growth From Enhancement of Services.

Increasing production efficiency through the creation of quality assurance systems, as well as strong, durable bonds through cold glue and hot melt adhesive technologies is central to Valco Melton's prominence in the packaging, paper converting, woodworking, graphic arts, product assembly, and non-woven industries. We are happy to offer you a free full line audit to determine ways to save you money and increase overall production. Through the strong alliance of each of our offices worldwide and by using either Valco® or Melton® brand products, we are able to supply you with the inspection, hot melt, or cold gluing system solutions you are looking for.

Valco Melton is now a combined strength in over 52 countries working together to bring you everything you need, offering comprehensive service worldwide through an extensive design, manufacturing, sales, and service network, around the clock.

Further Innovation for Continued Excellence.

Demand is ever evolving. New materials, processes, and technological advances emerge everyday in the industrial world. At Valco Melton, we work at an ongoing pace with efforts in research and development to improve our projects and technology, obtain the best solutions for new products and processes, and to enhance our level of service.

With highly skilled engineers in three engineering divisions, special projects are no problem. Together, we will find the best solution for your company.
